Matheus Freitas

PHP & NodeJS Developer, Entrepreneur
São Paulo

Experiência

Aaxis

Founder & Developer

maio de 2021 - fevereiro de 2022 (10 meses)

São Paulo, Brasil

Aaxis, previously "Assistência de Microondas", was born in May/2021 as a microwave fix company who attended some neighborhoods in São Paulo. Through technology, the company expanded to the entire São Paulo city.

The backoffice was developed in Laravel and VueJS, while the real-time integrations and on demand analysis was made on NodeJS with AdonisJS, all hosted in Google Cloud infrastructure and with PostgreSQL as database.

The NodeJS application recognized smart routes through calculations to match the client and the technical partner location, decreasing the response time and increasing revenue of our partners. Aaxis was slowlyly becoming "Uber of appliances fixers"

Hubchain Technologies

Software Engineer

julho de 2020 - fevereiro de 2021 (8 meses)

Created a pharmaceutical marketplace with Laravel, MySQL (MariaDB), VueJS and Google Cloud as infrastructure (App Engine). We developed all the core components from zero: payments (and its integrations), products, storages, logistics, cashback and more.

DevRemoto

Founder

setembro de 2018 - julho de 2020 (1 ano 11 meses)

Brazilian job hub focused on remote developers. The first version was developed using Google Firebase and HTML/CSS. After launch, we developed a new version in Laravel, MySQL, VueJS and a Digital Ocean droplet for infrastructure. The first version was launched in 2 days. The second in two weeks.

Edulabzz

Software Engineer

janeiro de 2020 - junho de 2020 (6 meses)

Built a LMS platform using Laravel and PostgreSQL. VueJS was used in front-end.

Agência EVERY

Software Engineer

janeiro de 2019 - janeiro de 2020 (1 ano 1 mês)

Developed systems and apps using Node, PHP, Node-red, MariaDB, Redis, Laravel, Symphony, Vue and React. Created applications for OLX, WebMotors and DOW that was receiving from 10 visitors to 5000 everyday. They were all hosted at Google Cloud using Compute Engine.

Sem Hora

Software Engineer

dezembro de 2016 - dezembro de 2017 (1 ano 1 mês)

Vanilla PHP, MySQL, MongoDB (using Parse). Ticket seller platform with over \$1mm being handled every month. We reduced the checkout time to 2secs and improved the general performance. The project was spending \$1k in AWS costs and we manage to reduce it to \$200 while also improve the sales through technology.

Programind Media Intelligence

Back-end Developer

julho de 2016 - setembro de 2016 (3 meses)

São Paulo e Região, Brasil

Created chatbots using AI to reduce money spent in advertisements using NodeJS, Phalcon (PHP), MongoDB and Redis. The infrastructure was handle using GCloud. Since this was a big data project, the challenge was to not lose performance and also be capable of serve real time data.

PrimePass

PHP Developer

agosto de 2015 - julho de 2016 (1 ano)

Created a scalable infrastructure to handle a national platform of "Watch movie as a Service" similar to MoviePass. PHP with Laravel, Wordpress, Angular, NodeJS, Cordova and MySQL was used.

The platform was hosted in AWS.

DATA CUBO

PHP Developer

janeiro de 2015 - junho de 2015 (6 meses)

Develop and maintain systems written mainly in PHP, jQuery, MySQL and CodeIgniter framework. We did a platform to measure ROI.
